Git & Github

Assignment Task

Push all your existing projects in separate Github repositories using git commands.

- CreditWise Loan System
- SmartCart Segmentation System

Important Note

1. Don't include the dataset in the repository. There are 2 ways to do that:
   - Create a new folder without the dataset & push that onto Github.
   - Include the dataset in a special file called `.gitignore` [Read more here]
2. Add a README describing the project.

Also push all your future projects onto Github.
